

BREAKTHROUGH ADVANCES IN TILE CLEANING TECHNOLOGY

Even the most beautiful homes can be marred by the appearance of tiles suffering from stains built up on the porous tile surfaces.

In the past, options for effectively cleaning tiles were pretty disappointing. You could spend hours scrubbing your tiles and grout on your hands and knees. Or, you could rip out the tiles and replace them with new ones... at a high cost to both your pocket and your home life.

Thankfully, a breakthrough in hard floor surface cleaning technology now makes it possible to achieve truly sparkling tile floors without back-breaking effort. C&M Cleaning Services use a revolutionary clean and capture system to restore tiles to their original shine and beauty. With one pass, stained and tired tiles are transformed into a floor that sparkles with its original vibrant colours. The specialised equipment penetrates deep into porous surfaces by pummeling stains with a steady stream of highly pressurised water which kept at a constant temperature of 250°C. This system is so effective, tiles

can be rejuvenated in less than 15 minutes. Mark from C&M Cleaning Services said: "People are amazed at the difference that can be achieved in such a short time. I've had clients say, 'You mean the grout is actually cream?' after the cleaning process has been completed" They almost don't believe it!

Joyce Thompson from Belfast uses C&M Cleaning Services every year to clean her kitchen tiles. She said: "The comments from my neighbours and friends when C&M finish cleaning is fantastic. I would recommend C&M to anyone who is looking for any tiling that needs

cleaned. You wouldn't even know they are there, but you'll certainly know they have been."

To truly appreciate how this amazing clean and capture system renews tile and grout lines you need to see it in action. Quite simply, the difference is night & day. Call C&M today to arrange a FREE no obligation demonstration.
